info@k9bedbugdetectionnw.com

### PRE-INSPECTION INSTRUCTIONS AND POLICIES

Our sole mission is to detect the scent of bed bugs (adults, nymphs and eggs), our commitment is to provide you with the most accurate results. In preparation for our visit we ask that the following steps to ensure the highest detailed inspection.

1. Please have the inspection area clutter free
2. *For health and safety reasons we cannot inspect any area, furniture or structure that has been chemically treated for insects either by a professional or individual within the last 30 days. These chemicals can be extremely toxic to our K9s.*
3. Do not use any type of household cleaners or disinfectants for at least 24 hours prior to the inspection. Strong competing odors make it difficult for us.
4. Extinguish all smoking materials, cigarettes, cigars, pipes, etc. .8 hours prior to inspection .
5. All pets must be removed during our inspections. Dogs must be outside, placing a cat in a bathroom is OK and bird cages must be covered.
6. Pet food and water bowls should be place on a counter. Pet toys should also be picked up.
7. **Competing odors** make the work of our dog harder, please discontinue the use of indoor products designed to conceal odor such as air fresheners, candles, carpet deodorizers, incense, etc. for 24 hours prior to our inspection.
8. **Noise and human distractions** must also be minimized to avoid distractions.
9. Air conditions, heaters and ceiling fans need to be turned off 60 minutes prior to our arrival.
10. To keep our dog focused, no socialization should occur until after the inspection is complete.
11. Our handler may refuse to search a given area if the above steps are not followed or any danger to our dog.

Our canine teams will perform at the highest possible accuracy if all the above conditions are met.

*I hereby acknowledge to have read this instructions sheet and understand the adequate preparation is required before a K9 inspection can be conducted successfully.*

Signed: \_\_\_\_\_ Dated: \_\_\_\_\_

*Disclaimer: While no bed bug inspection can always be 100% effective, the use of a trained K9 is the most accurate means of detection currently available. The more access our dogs have the more accurate the search will be. No one method of detection is 100% foolproof and a re-inspection of the area may be warranted after a few days if new signs of bedbugs appear. Our handlers are not licensed pest control management professionals, eradication of bed bugs must be done by a license pest control company.*

*Any liability on the part of K9 Bed Bug Detection NW, LLC is strictly limited to the amount paid to the company for the scent detection service.*
